India (IST) · Remote experience since 2019 · US-morning / full EU-hours overlap · Contract (B2B) or full-time

SUMMARY

Full-stack engineer who moved into AI agents and ML, working the way a forward deployed engineer does: sit with the customer, turn a messy problem into working software, own it in production. Currently lead developer of a 4-agent LangGraph assistant on Google Vertex AI for **Procter & Gamble**. Fine-tuned Gemma with two LoRA adapters, lifting incident-severity accuracy from **7% to 89%**. 10+ years working directly with enterprise customers (Etisalat, Sherweb, P&G), the last 5+ as a hands-on engineer.

EXPERIENCE

Software Engineer – Enterprise AI | LTIMindtree — Dec 2024 – Present
Client: Procter & Gamble · Google Vertex AI · LangGraph · Gemini 2.5 Flash · Azure AI Search · MCP

- Lead developer of a 4-agent assistant built in LangGraph and deployed on Google Vertex AI; took it from solution design to production and translated P&G business rules into agent behavior.
- Designed the agent graph: an intent agent routes each request to specialist agents, a retrieval agent queries the client's Azure AI Search RAG via MCP tool nodes, and a resolver agent updates graph state and proposes solutions.
- Set up evals and tracing in Arize Phoenix to find and fix routing failures; reached ~70% intent accuracy on open-ended, unconstrained user questions, including off-topic input and file uploads.

Freelance AI Engineer | Upwork — Jan 2024 – Aug 2024 · Remote

- Built a RAG sales assistant over a 13K-item inventory for demand forecasting and stock optimization; sell-through up 30%.

Software Engineer – Enterprise M365 | Sherweb (Canada) — Nov 2021 – Nov 2023 · Remote

- Customer-facing engineer for enterprise Microsoft 365 tenants (Exchange, SharePoint, Teams, Azure AD): diagnosed issues live with customer IT teams, held a 99.5% SLA, led SEV-A recoveries.
- Turned repeat customer problems into software: Intune + Graph API monitoring with Teams alerts (detection 45% faster) and a React/PostgreSQL ticketing system (response time down 35%).

Freelance Software Engineer | Upwork — Dec 2019 – Aug 2020 · Remote

- Delivered full-stack React and WooCommerce builds with payments and analytics for 15+ clients; $20K+ earned.

Technical Operations & Client Coordination | Etisalat — Nov 2013 – Oct 2019 · Dubai, UAE

- Linked 3 engineering teams with enterprise telecom clients: incident triage, escalations, post-incident reviews, SLA negotiation.

SELECTED AI PROJECTS

Fine-Tuned Gemma for IT Incident Triage | Python · Gemma 270M · LoRA | Repo & adapters

- Prompting plateaued at ~20% accuracy, so I fine-tuned Gemma 270M on 1,500 real incident examples. Diagnosed that severity was failing, added 400 targeted examples and trained a second LoRA adapter: one base model, two specialist adapters.
- Severity accuracy rose from **7% to 89%**. Wrapped it in a workflow with human-review routing to Teams and handoff to ServiceNow, Jira and CRM.

CryptoClever – Real-time multi-agent trading platform (live) | Python · WebSockets · Binance API · ChromaDB

- Solo-built: scalping (1-min candles), swing (4–8 h reversals) and news agents (LLM scores each event +1/−1); an AI layer double-confirms every signal before it is broadcast live to users.
- Execution agent scans every Binance spot symbol and trades 24/7; swing agent ~62% accurate over 45 days of live logs.

WriteBookAI – Agentic SaaS for authority books (live) | React · Node.js · PostgreSQL · Stripe | writebookai.com

- Solo-built platform that helps professionals create authority books in their own voice: agents orchestrate OpenAI, Claude and Gemini for voice matching and drafting; Kindle export, Stripe billing. 184 free-tier users, all organic.

SKILLS

Full-Stack: Python, TypeScript, Node.js, React, Next.js, REST, WebSockets, PostgreSQL, MongoDB, Redis, Docker
AI Agents & LLMs: LangGraph, multi-agent, MCP, RAG, Azure AI Search, ChromaDB, Gemini, OpenAI, Claude, Azure OpenAI
ML & Evals: LoRA fine-tuning (Gemma, Llama, Mistral), dataset curation, Arize Phoenix evals & tracing, failure-mode analysis
Cloud & Integrations: Google Vertex AI, Azure, Microsoft Graph API, ServiceNow, Jira, Stripe, OAuth2/JWT, n8n

EDUCATION

B.E., Electronics & Communication – Visvesvaraya Technological University, Bangalore **MBA** – Sikkim Manipal University
