## Forward-Deployed AI Engineer · Full-Stack AI Systems Engineer

aatif2003@gmail.com | India | +91 9769550173 | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

### PROFESSIONAL SUMMARY

Forward-Deployed AI Engineer who embeds directly with enterprise clients to design, build, and ship production AI systems end-to-end (0→1). 11+ years spanning software development (6 years) and enterprise client engineering (5 years). Build and deploy multi-agent systems, RAG pipelines, and agentic AI workflows for Fortune 500 clients (P&G, Etisalat); independently ship AI platforms — an AI ghostwriting tool with 170+ users, a multi-agent trading system, and an SEO content platform. Deep hands-on experience with LLM fine-tuning (LoRA/QLoRA), Transformer architecture, machine learning, and open-weight models (Llama, Mistral). Skilled at remote collaboration across US/EU time zones, rapid prototyping, and translating ambiguous customer problems into working production code.

### TECHNICAL SKILLS

|                |                                                                                                                                                                                                                                       |
|----------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| AI/ML          | Multi-Agent Systems, Agentic AI, RAG Architecture, LLM Fine-Tuning (LoRA/QLoRA), Machine Learning (scikit-learn), Transformer Architecture, Open-Weight Models (Llama, Mistral), Vector Databases (ChromaDB), Prompt Engineering, NLP |
| AI Platforms   | OpenAI API, Anthropic Claude, Azure OpenAI, Google Gemini, Google Vertex AI, LangChain, LangGraph, n8n (Agentic Workflows)                                                                                                            |
| Languages      | Python, JavaScript, TypeScript, SQL, React, Node.js, Next.js, Express                                                                                                                                                                 |
| Infrastructure | PostgreSQL, MongoDB, ChromaDB, Redis, Docker, Azure VM, WebSockets, REST APIs, ETL Pipelines                                                                                                                                          |
| Enterprise     | Microsoft 365, Microsoft Graph API, Azure AD, OAuth2, JWT, PowerShell, WordPress API, Stripe, Binance API                                                                                                                             |
| FDE Skills     | Client Embedding, Rapid Prototyping (POCs), Remote Deployment, Pre-sales Technical Evaluation, Stakeholder Management, Cross-Timezone Collaboration, SEV-A Incident Response                                                          |

### PROFESSIONAL EXPERIENCE

Software Engineer – Enterprise AI Solutions | [LTIMindtree](#)

Dec 2024 – Present

- Forward-deployed engineer embedding remotely with US and European enterprise clients; conduct virtual discovery sessions across time zones, diagnosing operational bottlenecks and translating them into production AI solutions
- Built a 4-agent market-research chatbot for P&G's internal research team using LangGraph multi-agent orchestration, deployed on Google Vertex AI; routes user intent to specialized agents for product-research surveys
- Designed and deployed healthcare AI automation system using LLMs, Agentic RAG, and n8n workflows — monitors patient health scores daily and triggers automated alerts when scores fall below clinical thresholds
- Deployed Azure OpenAI + Microsoft Graph API automation integrating with OAuth2, Azure AD, and legacy databases; eliminated 60% manual processing for 200+ daily users across 4 departments
- Built production RAG chatbot (Google Voice API, OpenAI embeddings, ChromaDB vector search, GPT-4) reducing inventory analysis from 2+ hours to under 30 seconds with 85% accuracy
- Collaborate with sales on pre-sales technical evaluations; deliver remote product demos to enterprise stakeholders supporting deal scoping and contract expansion

Developer (Contract) | [Upwork](#)

Jan 2024 – Aug 2024 · Remote

- Built RAG-based sales chatbot over 13K product inventory for fashion industry client, driving demand forecasting and stock optimization; improved sell-through efficiency by 30%

Software Engineer – Enterprise M365 | [Sherweb](#)

Nov 2021 – Nov 2023 · Remote

- Forward-deployed engineer embedding with enterprise clients; provided direct technical support on M365 platform (Exchange, SharePoint, Teams, Azure AD) maintaining 99.5% uptime SLA
- Acted as SME for SEV-A incidents; worked remotely to restore services within 2-hour SLA; collaborated with Microsoft engineering on tenant-level failures
- Built monitoring tool (Microsoft Intune + Graph API) with Teams webhook alerting reducing detection time by 45%; developed React/PostgreSQL ticketing system reducing response time by 35%

Developer (Freelance) | Upwork

Dec 2019 – Aug 2020 · \$20K+ earned · Remote

► Delivered M365 support for 15+ enterprise clients; built e-commerce solutions (React, WordPress/WooCommerce) with payment integration and SEO-optimized landing pages

Technical Operations & Client Coordination | Etisalat

Nov 2013 – Oct 2019 · Dubai, UAE

► Managed client coordination and negotiations across 3 engineering teams for telecommunications infrastructure; led incident triage, escalation workflows, and post-incident reviews

► Served as primary liaison between technical teams and enterprise clients; negotiated service agreements maintaining high client satisfaction

SELECTED PROJECTS

Enterprise client projects are confidential under NDA. Projects below demonstrate independent technical range.

CryptoClever – Multi-Agent Trading System

Under Testing / Pre-Deployment

► Agentic trading platform: 4 autonomous LangGraph agents — Scalp and Long-signal agents running 24/7 live on Azure VM, plus 2 algo-trading agents executing live trades on Binance via own decision logic

► Each signal passes 14 parameter checks including live news integration; ~60% signal accuracy | Tech: LangGraph, Python, Binance API, Azure VM, WebSockets, ChromaDB

WriteBookAI – AI Ghostwriter

Live Production · writebookai.com

► Extracts an author's voice DNA to write full chapters in the author's own style; 170+ active authors | Tech: React, Node.js, PostgreSQL, OpenAI/Claude/Gemini orchestration, Stripe

Blago AI – SEO Content Platform

Live Production

► AI platform generating human-style undetectable SEO content and publishing directly to WordPress within app | Tech: Google Gemini, React, WordPress API

Clevechat – RAG Document Chat

Production

► RAG-based conversational interface for querying uploaded documents | Tech: Python, LangChain, Vector Databases, LLM APIs

EDUCATION

B.E. Electronics & Communication – Visvesvaraya Technological University, Bangalore

MBA – Sikkim Manipal University

2013

Advanced Full-Stack Development Bootcamp – MERN Stack, System Design, Crio.do

2020

ADDITIONAL

► Certifications: ITIL Foundation (2015), Microsoft MD-101 (2023), Microsoft MS-900 (2023), Embedded Systems (Prolific Pvt. Ltd.)

► Experienced working remotely with European and US clients across multiple time zones; open to relocation

► Work authorization: Indian citizen, open to US/EU sponsorship
